Questionnaire for the event series: : „Digitalisierung in der Fernwärme? – Software & Tools"

"Digitisation in district heating? - Software & Tools"

2022 - 2023

General information about the event

Aims of the event series

Regardless of whether you are already selling a commercial product, would like to adapt an established product to the German market, are looking for partners for demo projects or an experienced practical partner from the district heating sector for the final development steps, in the course of the event series "Digitisation in district heating? - Software & Tools for District Heating Applications", you will have the opportunity to present the added value of your product and address your wishes to the industry.

With the event series "Digitalisation in district heating? - Software & Tools", the AGFW R&D department would like to offer innovative companies the opportunity to present themselves, their products and solutions to the district heating industry. The aim of the online offer is to reach different representatives of specific departments of a company, which is made possible by the short time required for participants. In this way, they can directly form an opinion as to whether and how a presented tool is helpful in their own company, and queries and discussions can be conducted very quickly on a professional level.

Registration

To register for a lecture in this series, we would like to ask you to fill out the following questionnaire, which will be used as a basis for advertising the individual lecture dates and giving the participants a rough overview of the expected topics. Furthermore, additional information is requested that will be used to present the presenting companies on the website www.fernwaerme-digital.de. The presentation documents will also be filed there. You are welcome to provide us with your logos for use on the website (preferably in high resolution and with transparent background). You can find examples of presentations https://www.fernwaerme-digital.de/software-tools

The event format

The events are conducted purely online and are limited to 60 minutes. After a short introduction by AGFW, each of the maximum of three speakers will have 10 minutes to present themselves and their product in the best possible way. Participants can send their questions via chat to the moderator at any time, who will then collect and process the questions. The moderator will then ask the questions afterwards or in the context of a concluding discussion round (up to 30 min) in which all presenters can have their say again.
The presentation slides (as PDF) must be sent to AGFW in advance. In this way, they can be accessed at short notice (e.g. in the event of technical problems with the web tool).

For the participants' follow-up and in order to use the widest possible range, we would like to reserve the right to publish the video recording of the lecture via the AGFW channels (public and internal members' area, AGFW websites, project websites, social media channels, etc.).

Business Positioning Statement (public)

The BPS provides space for a brief description of your product/service and its target market. You can use the space to outline, for example, how the product or service meets a specific need of the target market. You are also welcome to use the space to present your vision or goals.

(750 characters limit)

Classification of the field of application of your product/tool (public)

Status of the tool: [ ]------------------[ ]----------------[ ]--------------------[ ]

                         R&D   Prototyp   Marketable   commercial tool

Which "buzzwords" would you assign your tool to?

- AI/KI
- Big Data
- Blockchain
- Cloud Computing
- Deep Learning
- Virtual Reality
- Augmented Reality
- Digital Twin
- Others:

In which application areas can your tool be used (several answers possible)?

- Generation
- Distribution
- Consumption
- Total DH System
- Accompanying processes
- (End-) Customers
- Others:

In the medium term, a grouping of the companies on https://www.fernwaerme-digital.de/software-tools. Please select the classification that is most likely/ most applicable to your tool:

- Generation
- Distribution
- Consumption
- Total DH System
- Accompanying processes
- (End-) Customers

In addition, you are welcome to suggest another keyword under which you would group your tool:
